

## ELSAG ADVANCES ALPR TECHNOLOGY WITH TACTICAL OPERATIONS CENTER

ELSAG's Tactical Operations Center (TOC) software enhances the timesaving benefits of the MPH-900®. Every time an officer is alarmed that a suspect vehicle is nearby, he has the peace of mind of knowing that dispatch is already aware of the situation. If back-up or chase cars are needed, they will automatically be alerted without any effort from the MPH-900® patrol officer.

The newly released Tactical Operations Center PLUS (TOC PLUS) offers the flexibility to filter the various alarm types so that officers receive only alarm types associated with their missions. Filtering alarm types also allows Dispatch to coordinate resources more effectively.

Saving time not only saves money; in many cases, it saves lives. The MPH-900® helps officers all over the world become more efficient, more effective and safer than ever before.

## ELSAG ADVANCES ALPR TECHNOLOGY WITH TACTICAL OPERATIONS CENTER

Alert Service is installed on the CarSystem. This is just a service and requires no administration or user input. When a PLATE is HOT, the alarm passes to the repeater, independent of ACCEPT or REJECT.

TOC Client:

- Filter by car, camera, and now with TOC Plus, can filter by alarm type
- Must be able to communicate to the Repeater computer and maps.bing.com
- Can be installed on any computer (even other patrol vehicles)

### Features and Benefits of The Tactical Operation Center™ Software:

- Maximizes the use of ALPR fixed and mobile cameras
- Sends Real-time alarms to multiple sources (additional cars, dispatch, command center, etc.)
- Offers the flexibility to filter alarm types so officers receive only the alarms related to their missions
